

Suppanut Phonyomma

Currently looking for a job as a **web developer**

Profile

Since I was young, I've had a passion for computers and the Japanese language, starting coding at 15. This led me to study computer business in high school and then pursue a computer science degree at university. However, my ambition to work in a Japanese company shifted my focus to Japanese language studies alongside self-training in computer skills. Learning Japanese has not only taught me the language but also the culture and work ethic essential for collaboration. It has instilled in me qualities like diligence and responsibility, which I aim to apply in my future career
